

RINT

Rejilla inteligente Doble

Descripción

Rejilla Inteligente Doble de aluminio extrusionado con marco estándar de 26 mm, compuesta por: una primera fila de lamina verticales orientables manualmente y una segunda fila de lamina horizontales controladas mediante el conjunto biela-motor. Permite la regulación del caudal necesario para un correcto equilibrado de la red de conductos.

Datos técnicos

| | |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| Dimensiones | L: 200 – 1000 mm, H: 100 – 200 mm |
| Material | Aluminio extrusionado |
| Acabados | Blanco (RAL 9010) Anodizado |
| Sistema de fijación* | Clip (K), requiere marco de montaje Tornillo (T), requiere marco de montaje |
| Motor | Tensión de alimentación: ± 12 V Intensidad Nominal: 40 mA Intensidad máxima: 250 mA Par a la salida de la caja reductora: 0,8 Nm |
| Accesorios compatibles | Marco de montaje Plenum de rejilla (PREJ) |

*Nota: Para el montaje de rejillas en techo, Airzone recomienda el uso de fijación por tornillo.
